An immunogenic composition capable of producing a respiratory syncytial (RS) virus specific immune response a host immunized therewith comprises purified, inactivated RS virus which is substantially free from cellular and serum components and which is noninfectious, non-immunopotentiating, immunogenic and protective. The virus is grown on a vaccine quality cell line and harvested virus is purified under non-denaturing conditions to be substantially free from cellular and serum components. The purified RS virus is inactivated non-ionic β -propiolactone, a detergent, particularly n-octyl- α -D-glucopyranoside and n-octyl- β -Dglucopyranoside, or ascorbic acid. The immunogenic composition may be formulated as a vaccine for in vivo administration to a human host. The immunogenic composition also may be used in diagnostic applications.
